11:an Chair

Design Axel Bjurström

With number 11 as its name, this contemporary chair could be a countdown of style. The seat and backrest are formed by a series of wood slats that slope into a subtle curve. The slats are held in place by bands of steel that enable them to flex slightly, making the chair more comfortable. Lightweight, stackable, and made for use indoors and outside, 11:an makes a stunning addition to any restaurant, café, food court or conference centre.

Enter no letter for powder coated steel RAL 7022 grey
 R for powder-coated steel RAL 3007 red
 C for any color on steel, at an additional cost.

Standard colours

-  RAL 3007
-  RAL 7022
-  Oiled oak

Materials and surface treatments

Steel: Zinc plated and powder coated. Standard colours in RAL red 3007 and Grey 7022.
 Seat: Oiled oak.

Oak

Oak is a heavy, hard and medium tough wood. Moderately dimensionally stable in case of moisture changes. Oak wood blackens if it is exposed to moisture or wetness for a long time. However, it does not affect the other properties of the wood. Thanks to its hardness and toughness, the oak wood is suitable for furniture and other use in exposed environments.

Wood oil

Wood oil provides good protection against the stresses of the outdoor climate and at the same time highlights the wood's natural appearance and properties.

Steel

Nola uses high-quality steel with good strength in our products. Steel rusts if left untreated and must therefore be surface treated.

Electrogalvanized

Electrogalvanizing (also known as zinc plating) provides corrosion protection through the sacrifice of zinc ions. It is created via a zinc coating on the steel using an electric current.

Powder coating

Powder coating is a coating that is applied as a free-flowing, dry powder. Unlike conventional liquid paint, powder coating is usually applied electrostatically and then cured under heat or with ultraviolet light. The result is an even, hard-wearing coloured surface with the desired gloss level.

Assembly and placement**Freestanding**

Freestanding product that is placed directly on the ground.

Fully assembled.

Maintenance**Oiled oak**

Oiled oak should be oiled twice a year for best protection. Good maintenance can never completely prevent stains from occurring, but oak that is not maintained will turn blacker and turn gray faster, but it still has a very long life. When re-oiling products, a finely boiled oil that penetrates the wood should be chosen over a film-forming oil.

Powdercoated steel

Products that are powder-coated can be touch-up painted with alkyd paint.
