## Classical Cast-iron Urn

### Design

This elegant cast-iron planter mimics the style of classical Greek urns. Ornamental urns have decorated formal gardens since antiquity, adding a note of elegant craftsmanship to the environments around them. This planter is a perfect complement to traditional gardens and period architecture. It also complements historic districts, classic courtyards and public parks.

<b>Dimensions and weight</b>	<p>Height: 81 cm          Ø: 80 cm          Weight 180 kg</p>
<b>Product numbers and combinations</b>	<p>Ö30-51 Gjutjärnsurna.          Ö30-51BT10 Mona bevattningstank volym 10 L.</p>
<b>Standard colours</b>	<p> RAL 9005</p>
<b>Materials and surface treatments</b>	<p>The urn is made from rust-resistant sheet steel powder-coated in Noir 200 polyurethane paint.</p> <p><b>Cast iron</b>          Cast iron is iron with a carbon content between approximately 2 and 4 percent with a large proportion of recycled material. Compared to steel, it has a lower melting point and is therefore easier to melt and requires less energy. Thanks to the high carbon content, so-called graphite is formed. This is the main reason why cast iron, unlike steel, does not rust as quickly and thus has a very long life cycle.</p>
<b>Assembly and placement</b>	<p><b>Freestanding</b>          Freestanding product that is placed directly on the ground.</p> <p>Fully assembled.</p>
<b>Maintenance</b>	<p><b>Cast iron</b>          Untreated cast iron eventually rusts, but this does not affect its durability. Products in cast iron that are anti-rust treated and painted black should, however, be touch-up painted and maintained, at regular intervals, if necessary or in case of possible damage, with alkyd paint.</p> <p><u><a href="https://nola.se/en/care-and-maintenance">Read more in our general maintenance advice at nola.se/en/care-and-maintenance</a></u></p>
