Daisy Planter

Design Mia Lagerman

The daisy's popularity has led to its widespread use in urban areas, and now its rounded petals can be seen in planter design. The planter's bottom edge is sculpted in contours that recreate the outlines of daisy petals, creating a border of curving shapes. Made for use indoors and outside, the planter is fitted with adjustable feet to compensate for uneven surfaces.

conventional liquid paint, powder coating is usually applied electrostatically and then cured under heat or with ultraviolet light. The result is an even, hard-wearing coloured surface with the desired gloss level.

	Electrogalvanized Electrogalvanizing (also known as zinc plating) provides corrosion protection through the sacrifice of zinc ions. It is created via a zinc coating on the steel using an electric current.
Assembly and placement	Freestanding Freestanding product that is placed directly on the ground.
	No assembly required.
Maintenance	Powdercoated steel Products that are powder-coated can be touch-up painted with alkyd paint. Read more in our general maintenance advice at nola.se/en/care-and- maintenance
Versions	Circular, or oval.
Character	The daisy flower provided the inspiration for this contemporary planter made in zinc-electroplated powder-coated steel.
