Magnolia Planter

Design Jan Ostwald

Magnolia's surface resembles layered bands of metal, but it is cast in one piece. With its decorative lateral lines, Magnolia adds a contemporary note to any setting. Magnolia has a detachable base, making it possible to place the planter directly on the ground if required. The planter is made with a detachable lining, making it easier to remove plants for repotting or place them in the greenhouse in winter. An irrigation tank inside the planter keeps the compost moist.

Materials and surface treatments

Recycled sand cast aluminium

Aluminium recycled from scrap, hand cast in sand moulds. The energy consumption when producing recycled aluminium is about 5% of that used when producing virgin aluminium.

Plastic / Fiberglass

Glass fiber is often used as reinforcement in plastics to increase rigidity by coating a glass fiber fabric with a plastic, usually a polyester, which hardens and binds the glass fiber together.

Assembly and placement

Freestanding

Freestanding product that is placed directly on the ground.

Surface mount

Can be bolted above ground, to the floor or to a cast-in-place foundation. Bolts not included.

The planter and base are delivered separately.

Maintenance

Sand cast aluminium

Maintenance on aluminium is not normally needed, but make sure to wash and keep the material clean. Untreated aluminium develops a matte surface over time.

Versions

The planter is available with or without the base.

Character

Although Magnolia is a simple design, it comes with a wide range of options. The base can be removed, the inner liner detaches and the irrigation tank keeps compost moist.
