

Olimpo Seating furniture/Planter

Design Bellitalia

Olimpo is a round sitting piece of furniture in stone with an integrated planting vessel in the middle. Robust yet classic, it fits perfectly in public places where seating needs to be combined with plantings. Olimpo is made of granite or marble and is available in several colors on the stone. The planting is generous in size and houses smaller shrubs as well as trees.

Materials and surface treatments

Reconstituted natural marble stones

Reconstituted natural marble stones are using a base of cement and aggregates of highly prized natural marble stones of various sizes. This gives us a material with the beauty of natural stone combined with the technical characteristics of concrete. To produce the marble stone conglomerate, white cement is mixed with inert materials of various size from Italian marble quarries. The dust from the same natural stone gives the products its characteristic final color.

Reconstituted granite

Reconstituted granite consists of a cement base and river-based aggregates of various sizes. This gives us a material with the beauty of natural stone combined with the technical characteristics of concrete. To produce grey granite, cement is used with inert materials from local quarries. To produce white granite, white cement is used with white inert materials from local quarries.

Polishing

The material is polished manually, or mechanically with robotic machines, to remove the surface layer and give the product an elegant, shiny and bright look.

General finishing Bellitalia

All visible surfaces are covered with a transparent protective anti-decay coating that prevents water absorption ensuring inalterability of the product over time and protect it from erosion by atmospheric pollutants and by the formation of frost and mold. On request, the goods can be treated with nanotechnology products or with anti-graffiti varnish, which facilitates the removal of any signs of vandalism carried out with permanent markers or spray.

Assembly and placement

Freestanding

Freestanding product that is placed directly on the ground.

Maintenance

Bellitalia Reconstituted stones

The materials are extremely durable that requires minimal maintenance. This purely consist of the treatment of the surface with very fine abrasive paper and in the re-application of one or more coats of acrylic protective varnish. In case of accidental chipping of the artifacts made of conglomerate, Bellitalia provides a repair kit consisting of a bi-component material the same as the original. To apply simply clean the chipped area, removing any dust or deposits and then apply the paste-component. Once the drying time is completed, it is sufficient to apply a coat of transparent acrylic anti-decay varnish.
