Otto Litterbin

Design

The Otto family includes three hardwearing designs that provide efficient receptacles for rubbish, cigarette ends and plastic waste. The litterbins are made in dark green or black polyethylene and printed with the universal graphic symbol depicting its function. The designs are easy to empty and maintain, making them a popular choice among municipalities around the world.

Materials and surface treatments

Plastered Concrete.

Otto is made in UV-resistant frost-proof polyethylene plastic or in hot-dip galvanized, lacquered sheet steel

Otto City is made in pressed sheet steel; the integrated ashtray is reinforced to make it fireproof.

Otto Stockholm is made in polyethylene plastic or sheet steel.

Steel

Nola uses high-quality steel with good strength in our products. Steel rusts if left untreated and must therefore be surface treated.

Hot-dip galvanized

Hot-dip galvanizing provides very strong protection against corrosion. The steel is dipped into a bath of hot liquid zinc. The zinc attaches and creates a surface coating on the steel part, which is then taken out of the bath and drained of excess zinc.

Powder coating

Powder coating is a coating that is applied as a free-flowing, dry powder. Unlike conventional liquid paint, powder coating is usually applied electrostatically and then cured under heat or with ultraviolet light. The result is an even, hard-wearing coloured surface with the desired gloss level.

Assembly and placement

The litterbins should be attached to a post or other supporting structure with bolts, screws, metal bands or rubber straps. Posts and supporting structure are not included.

Maintenance

Clean with mild detergent as required. Scratches to polyester powder-coated steel can be repainted with alkyd oil enamel as needed.

Powdercoated steel

Products that are powder-coated can be touch-up painted with alkyd paint.

Hot dip galvanized steel

Hot-dip galvanized can be touch-up painted with so-called "cold galvanizing".
