## **Simpel Bike Rack**

**Design Nola**

This straightforward bike stand is uncompromisingly simple. Made from steel, the bicycle stand is shaped by bends in the metal. Available in three sizes, Simpel is suited to a wide range of spaces. Each version provides an efficient means of securing a bicycle, while all three designs can be combined to create an extended bicycle rack.

### **CERTIFICATION**

#### Dimensions and weight

##### Small version

Height above ground: 80 cm. Overall height: 120 cm. Width: 30 cm. C-C distance: 26 cm.

##### Large version

Height above ground: 80 cm. Overall height: 120 cm. Width: 100 cm. C-C distance: 96 cm.

##### Crooked version

Height above ground: 80 cm. Overall height: 120 cm. Width: 100 cm. C-C distance: 96 cm.

#### Individual dimensions

The diameter of the steel pipe is 40 mm.

#### Product numbers and combinations

Ö03-00 Simpel Small

Ö03-01 Simpel Large

Ö03-02 Simpel Crooked

B11-06 Startup cost for powder coating steel in a color other than standard

#### Append to product number

##### METAL SURFACE FINISH

A for powder coated steel.

G for hot-dip galvanized design.

C for any color of steel, at an additional cost.

#### INSTALLATION TYPE

M for in-ground.

N for surface mount.

#### Standard colours

- Gris 2900 Sablé
- Hot-dip galvanized steel

<b>Materials and surface treatments</b>	<b>Steel</b>
	Nola uses high-quality steel with good strength in our products. Steel rusts if left untreated and must therefore be surface treated.
	<b>Hot-dip galvanized or electrogalvanized and powder coating</b>
	Available in either only hot-dip galvanized steel or electro-galvanized and powder-coated steel.
	Hot-dip galvanizing provides very strong protection against corrosion. The steel is dipped into a bath of hot liquid zinc. The zinc attaches and creates a surface coating on the steel part, which is then taken out of the bath and drained of excess zinc.
	Electrogalvanizing provides corrosion protection through the sacrifice of zinc ions. It is created via a zinc coating on the steel using an electric current. Powder coating is a coating that is applied as a free-flowing, dry powder. Unlike conventional liquid paint, powder coating is usually applied electrostatically and then cured under heat or with ultraviolet light. The result is an even, hard-wearing coloured surface with the desired gloss level.
<b>Assembly and placement</b>	<b>In-ground</b>
	Cast in ground.
	<b>Surface mount</b>
	Can be bolted above ground, to the floor or to a cast-in-place foundation. Bolts not included.
	Available as both in-ground and surface mount as placements options.
<b>Maintenance</b>	<b>Powdercoated steel</b>
	Products that are powder-coated can be touch-up painted with alkyd paint.
	<b>Hot dip galvanized steel</b>
	Hot-dip galvanized can be touch-up painted with so-called "cold galvanizing".
