Korg Bar Table and Bar Chair

The bar furniture uses the same footplate as other furniture in the Korg Furniture Series. They are also available in the options of Surface mount N or In-ground M stand.

The bar chair is available as both fixed and swivel version.

The bar table is available with both a table top in electro-galvanized and powder-coated steel and in laminate.

SU12-34-BARLAM

The table top can be obtained with any graphic print, such as a game board or logo.

Ready-made game boards available to order:
Chess, Fia and Othello.

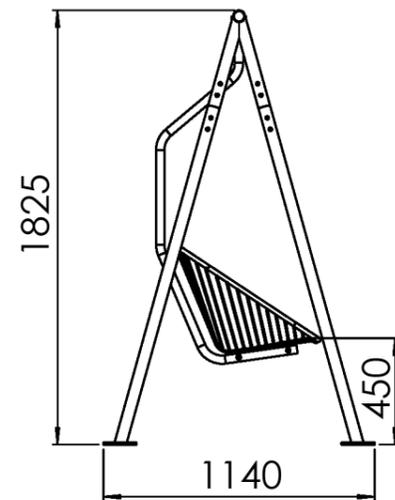

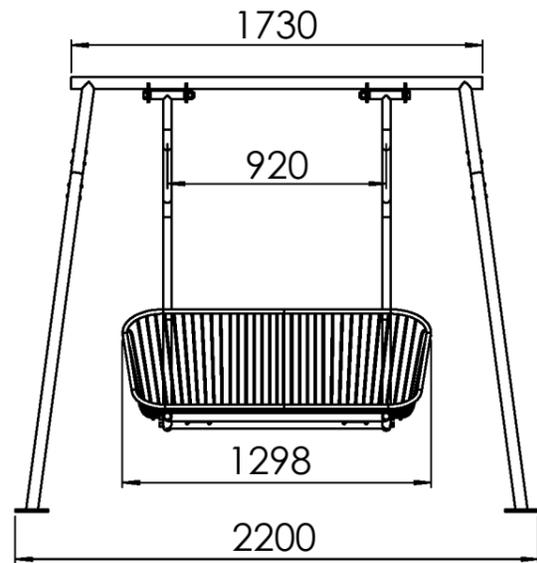

Contact Nola for more info.

U12-38N Korg Swing sofa

U12-38N Korg Swing sofa and U12-38T
Roof for Korg Swing sofa (roof only)

Korg Swing sofa

Korg Swing sofa is delivered assembled. Korg Swing sofa and Roof for Korg Swing sofa are sold separately but are delivered assembled when ordered together, so no assembly is required, just surface mounting.

See more information on Korg Swing sofa product page on our website.

Assembly Table

Ritad av Joachim Henriksson
Ritad datum 2025-10-16

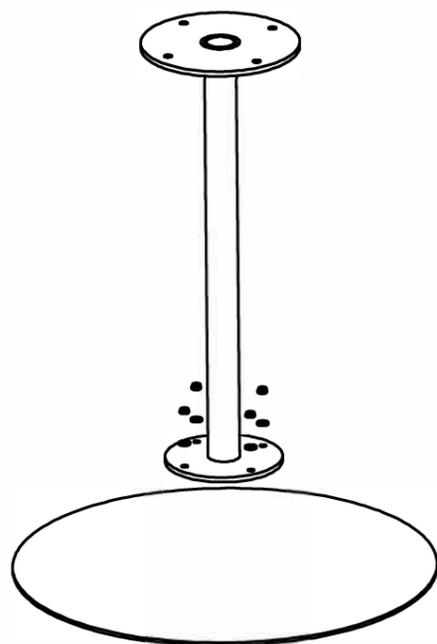

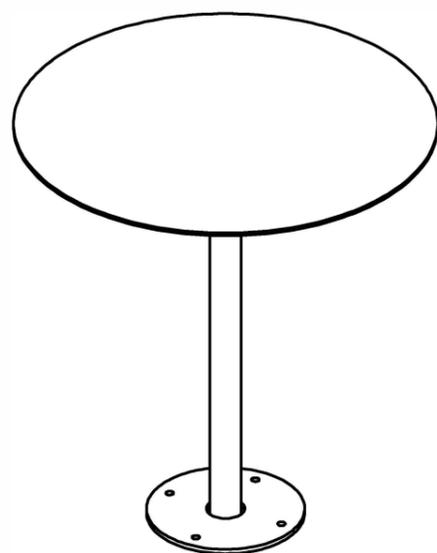

Table Assembly

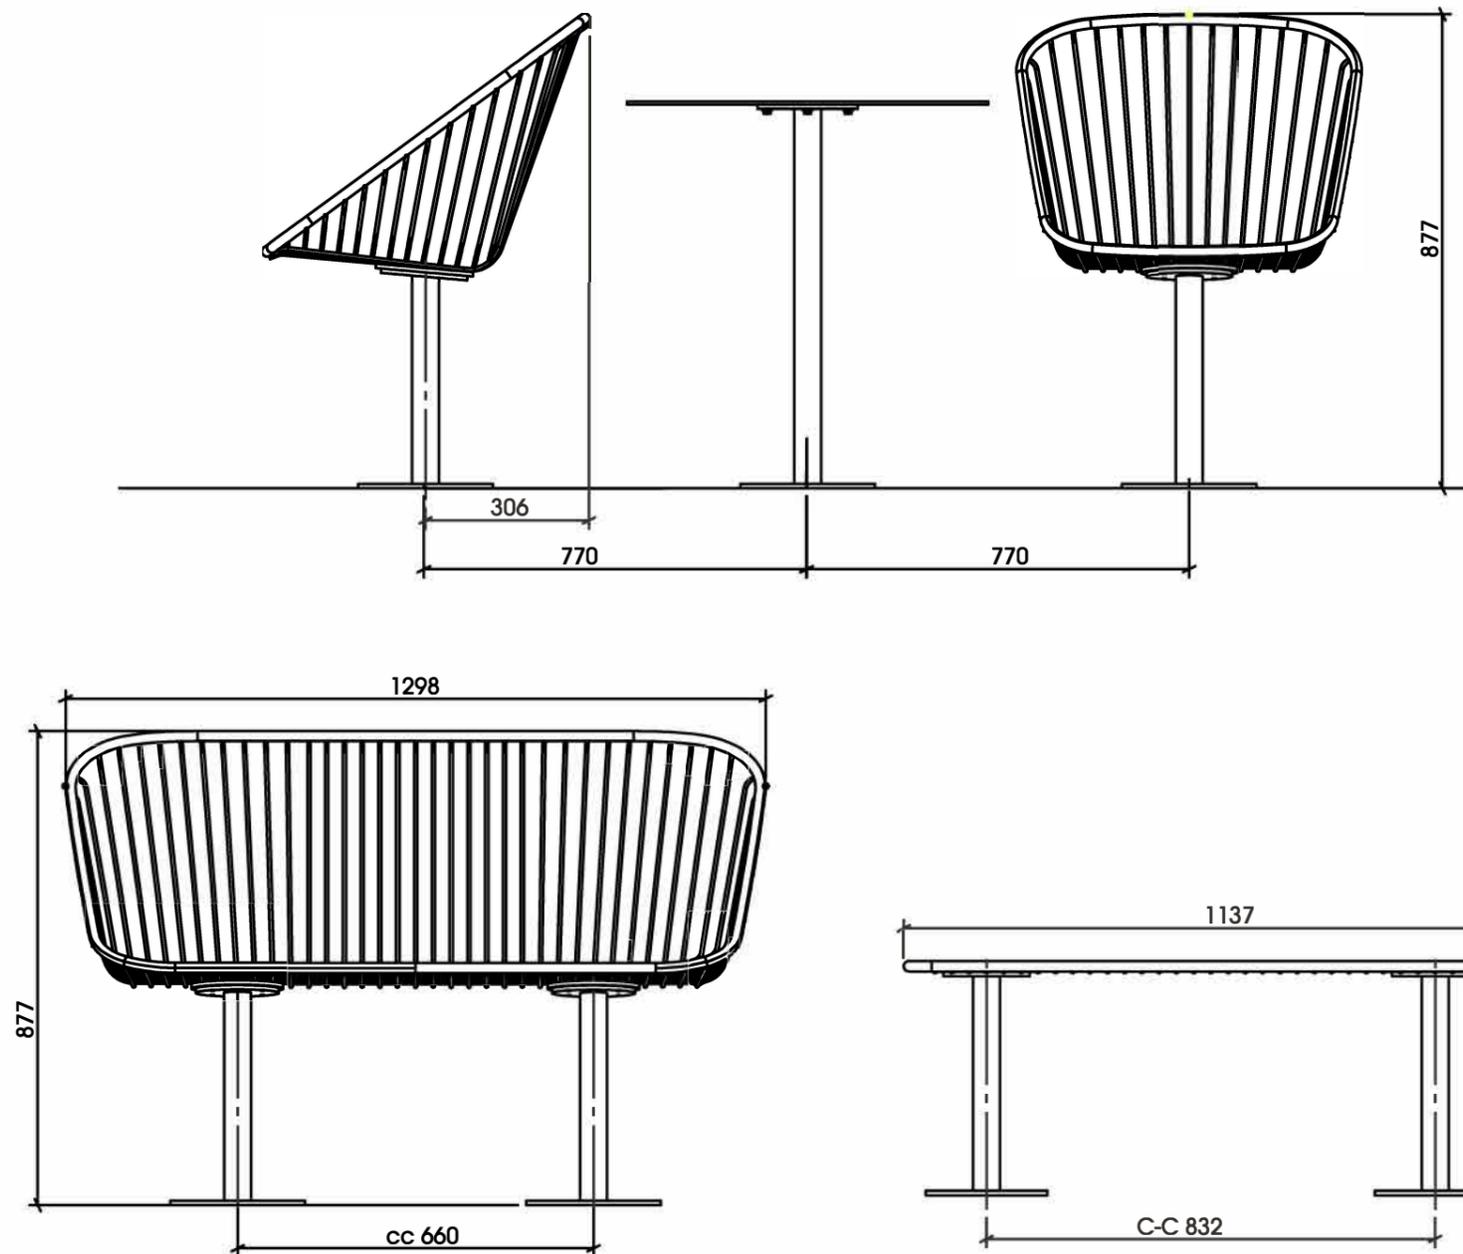

Turn the table top upside down, making sure to place it on some protective material so that the paintwork is not damaged. Mount the stand to the table top with the enclosed M8 locknut and washers.

NOTE! Take care when tightening the nuts. With too much force, a single stud screw can break. The nuts do not need more force than for the contact surfaces to meet and after that the nuts are tightened a maximum of 1/4 turn.

Surface mount/N

The attachable model has a perforated footplate for mounting with an M10 screw.

NOTE! The leg should always be mounted on the sofa when it is screwed to the ground. Since the seat tilts, this is important because a small angle deviation can mean that the sofa cannot be mounted even if the C-C measurement is correct.

Mounting on a wooden base

Mount with a French wood screw to a wooden base.

Mounting on paving stones or street tiles

Cast the tiles under with concrete. There must be no settling sand between the tiles and the concrete. Drill the tile for expanders or chemical anchors.

Mounting on concrete or stone blocks, etc.

Mount with chemical anchors or expanders as above. Mounting with expanders provides a removable attachment.

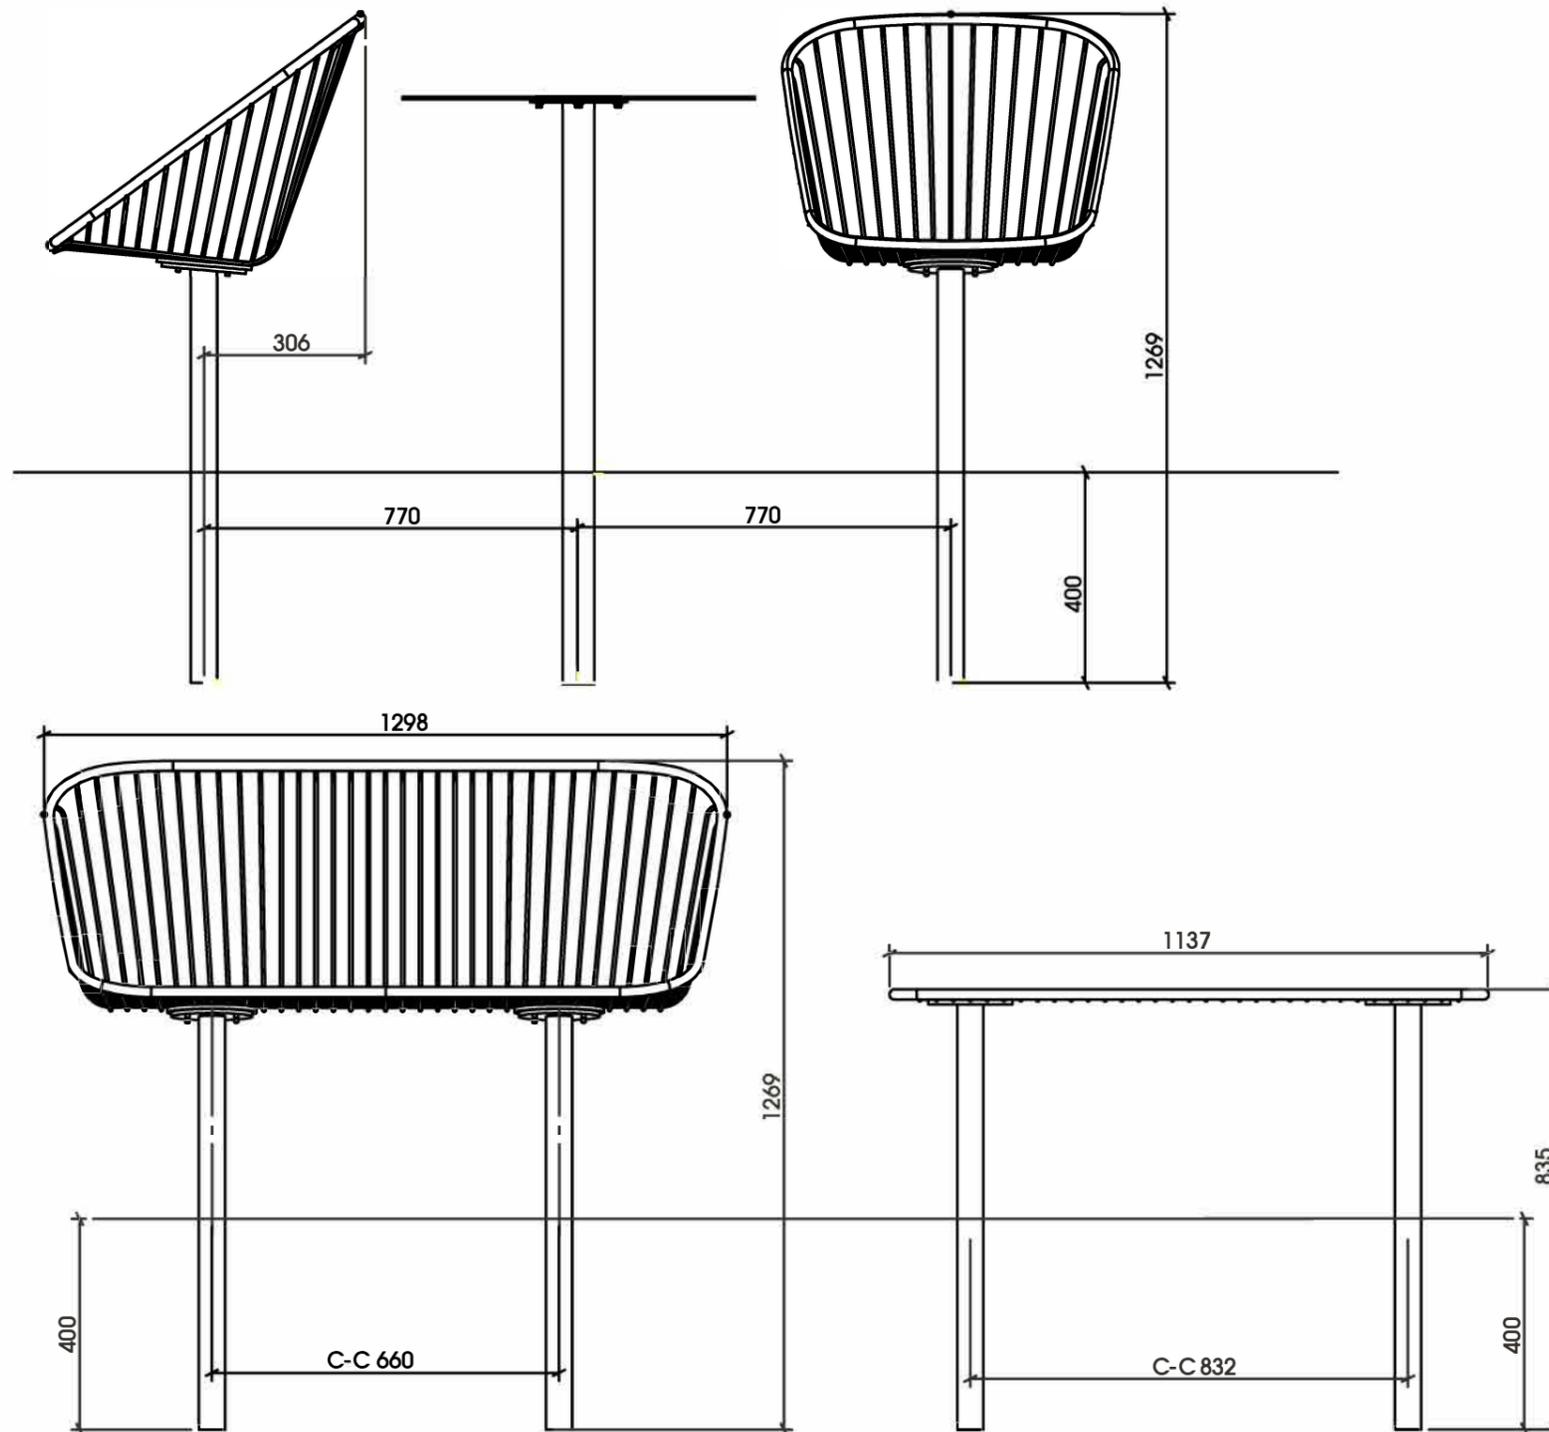

NOTE! When a chair is mounted with an accompanying table, the measurement between the center of the chair leg and the table leg must be around C-C 770 mm.

This is so that the back of the chair does not hit the edge of the table when the chair is spun around, but is still at a comfortable sitting distance from the table.

In-ground/M

Dig a hole in the ground with a diameter of approximately 400 mm. Dig to a frost-free depth. Foundation with non-frost-resistant material so that the depth of the hole is approximately 500 mm.

Set up the armchair with the leg in the dug hole.

Brace the armchair both vertically and laterally.

The tube that forms the front edge of the chair seat should be approximately 420 mm above the finished ground surface.

Cast the leg into the ground with concrete. The concrete should not go all the way up to the ground surface but end approximately 50 mm below the ground surface.

Backfill the ground and complete the ground surface.

NOTE! When the chair is mounted with an accompanying table, the measurement between the center of the chair leg and the table leg must be around C-C 770 mm.

This is so that the chair back does not hit the edge of the table when the chair is spun around while still being at a comfortable sitting distance but from the table.

Table and Chair Assembly

Assembly is done with 4 screws and washers included.

Surface mount/N

The surface mount version has a perforated footplate for assembly with four M10 screws.

NOTE! The leg should always be mounted on the furniture before it is screwed to the ground. Since the seat tilts, this is important because a small angle deviation can mean that the sofa cannot be assembled even if the C-C measurement is correct.

Assembly on a wooden base

Assembly with a French wood screw to a wooden base.

Assembly on paving stones or street tiles

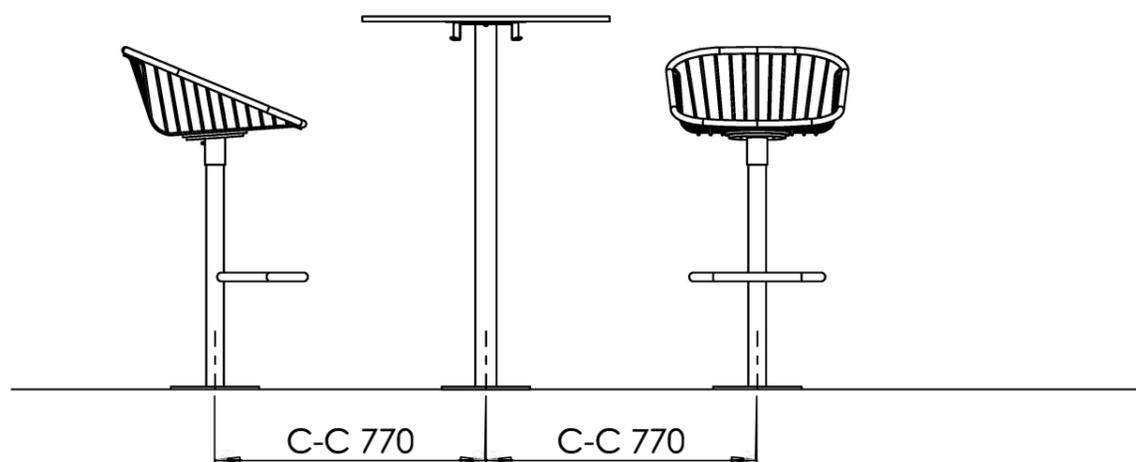

Undercast the tiles with concrete. There must be no settling sand between the tiles and the concrete. Drill the tile for expanders or chemical anchors.

Assembly on concrete or stone blocks, etc.

Assembly with chemical anchors or expanders as above. Assembly with expanders provides a removable attachment.

NOTE! When the chair is assembled with an accompanying table, the measurement between the center of the chair leg and the table leg must be around C-C 770 mm.

This is so that the back of the chair does not hit the edge of the table when the chair is spun around, but is still at a comfortable sitting distance from the table.
