Installation of permanently mounted furniture

By Odin Sollie
Drawn on 2025-10-29

DETAIL A
SCALE 1 : 5

DETAIL B
SCALE 1 : 5

The seats, seat baskets, and tabletops of the furniture are delivered fully assembled, including the wooden parts, while the legs are delivered separately.

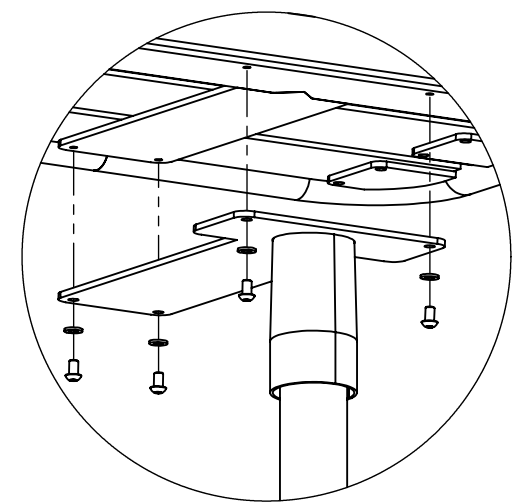

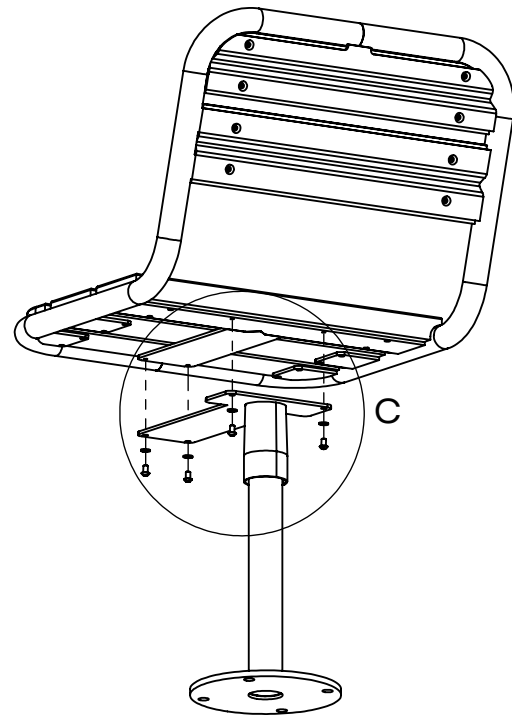

The legs are attached to the top sections of the furniture using four supplied M6 or M8 screws and washers per leg top. This applies to both the surface-mountable legs and the legs designed for casting into concrete.

Before fixing the furniture to the ground, position the items as they are intended to stand, so that the holes in the foot plates can be marked for drilling the foundations, or the pits can be dug in the correct locations and at the correct centre-to-centre spacing for casting.

Installation of swivel chair

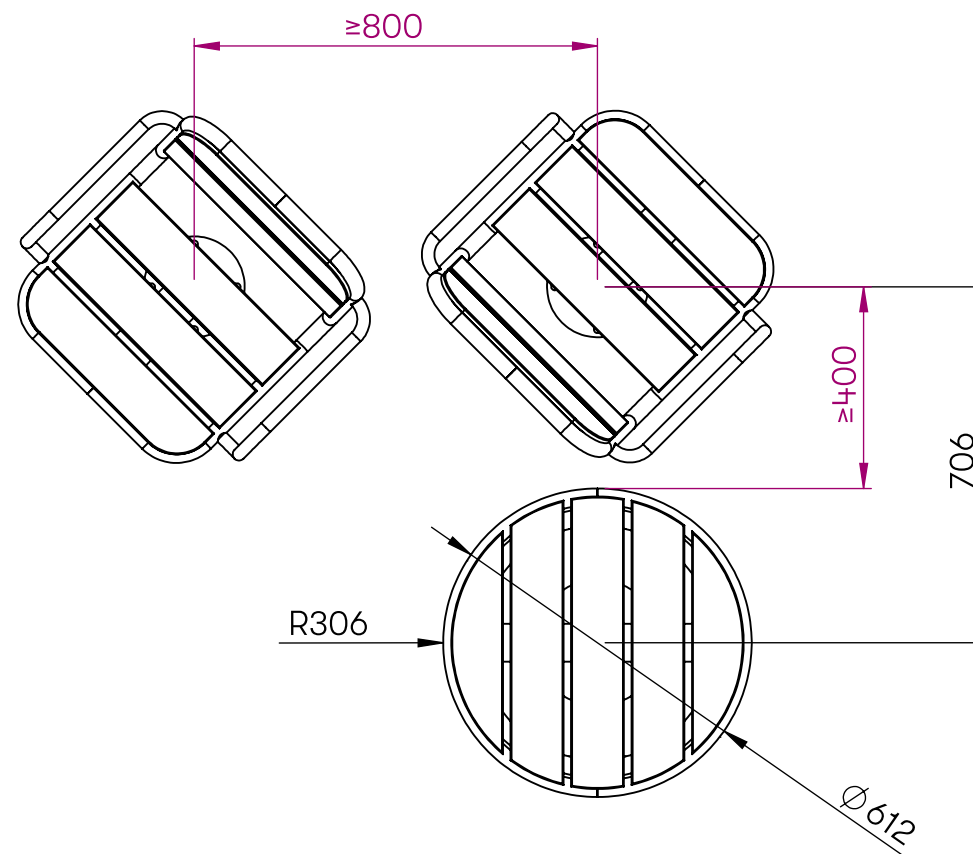

By Odin Sollie
Drawn on 2025-10-29

DETAIL C
SCALE 1 : 5

ATTENTION! If the swivel chair is mounted to the ground in this direction, it will always return to this position.

The swivel chairs are assembled in the same way as the regular chairs, by attaching the leg to the underside of the seat using the four supplied M6 screws and washers.

The ground mounting is done in the same way as well. However, for the swivel chair with the auto-return function, it is just as important as with a fixed chair that it is mounted to the floor in the exact intended orientation.

The auto-return function ensures that the chair always returns to its original position. Once it is mounted to the ground, it will therefore always return to this direction.

For the same reason, the seat must not be twisted in relation to the leg when inserting it into the ground mount, as the chair would otherwise swing back to a different position when released.

The rotation alignment between the mounting hole pattern and the chair orientation may not be exactly the same on all chairs.

ATTENTION! The swivel chair should be placed at least 400 mm from the center of the base to the edge of the table, and with a minimum center-to-center distance (C-C) of 800 mm from another swivel chair.

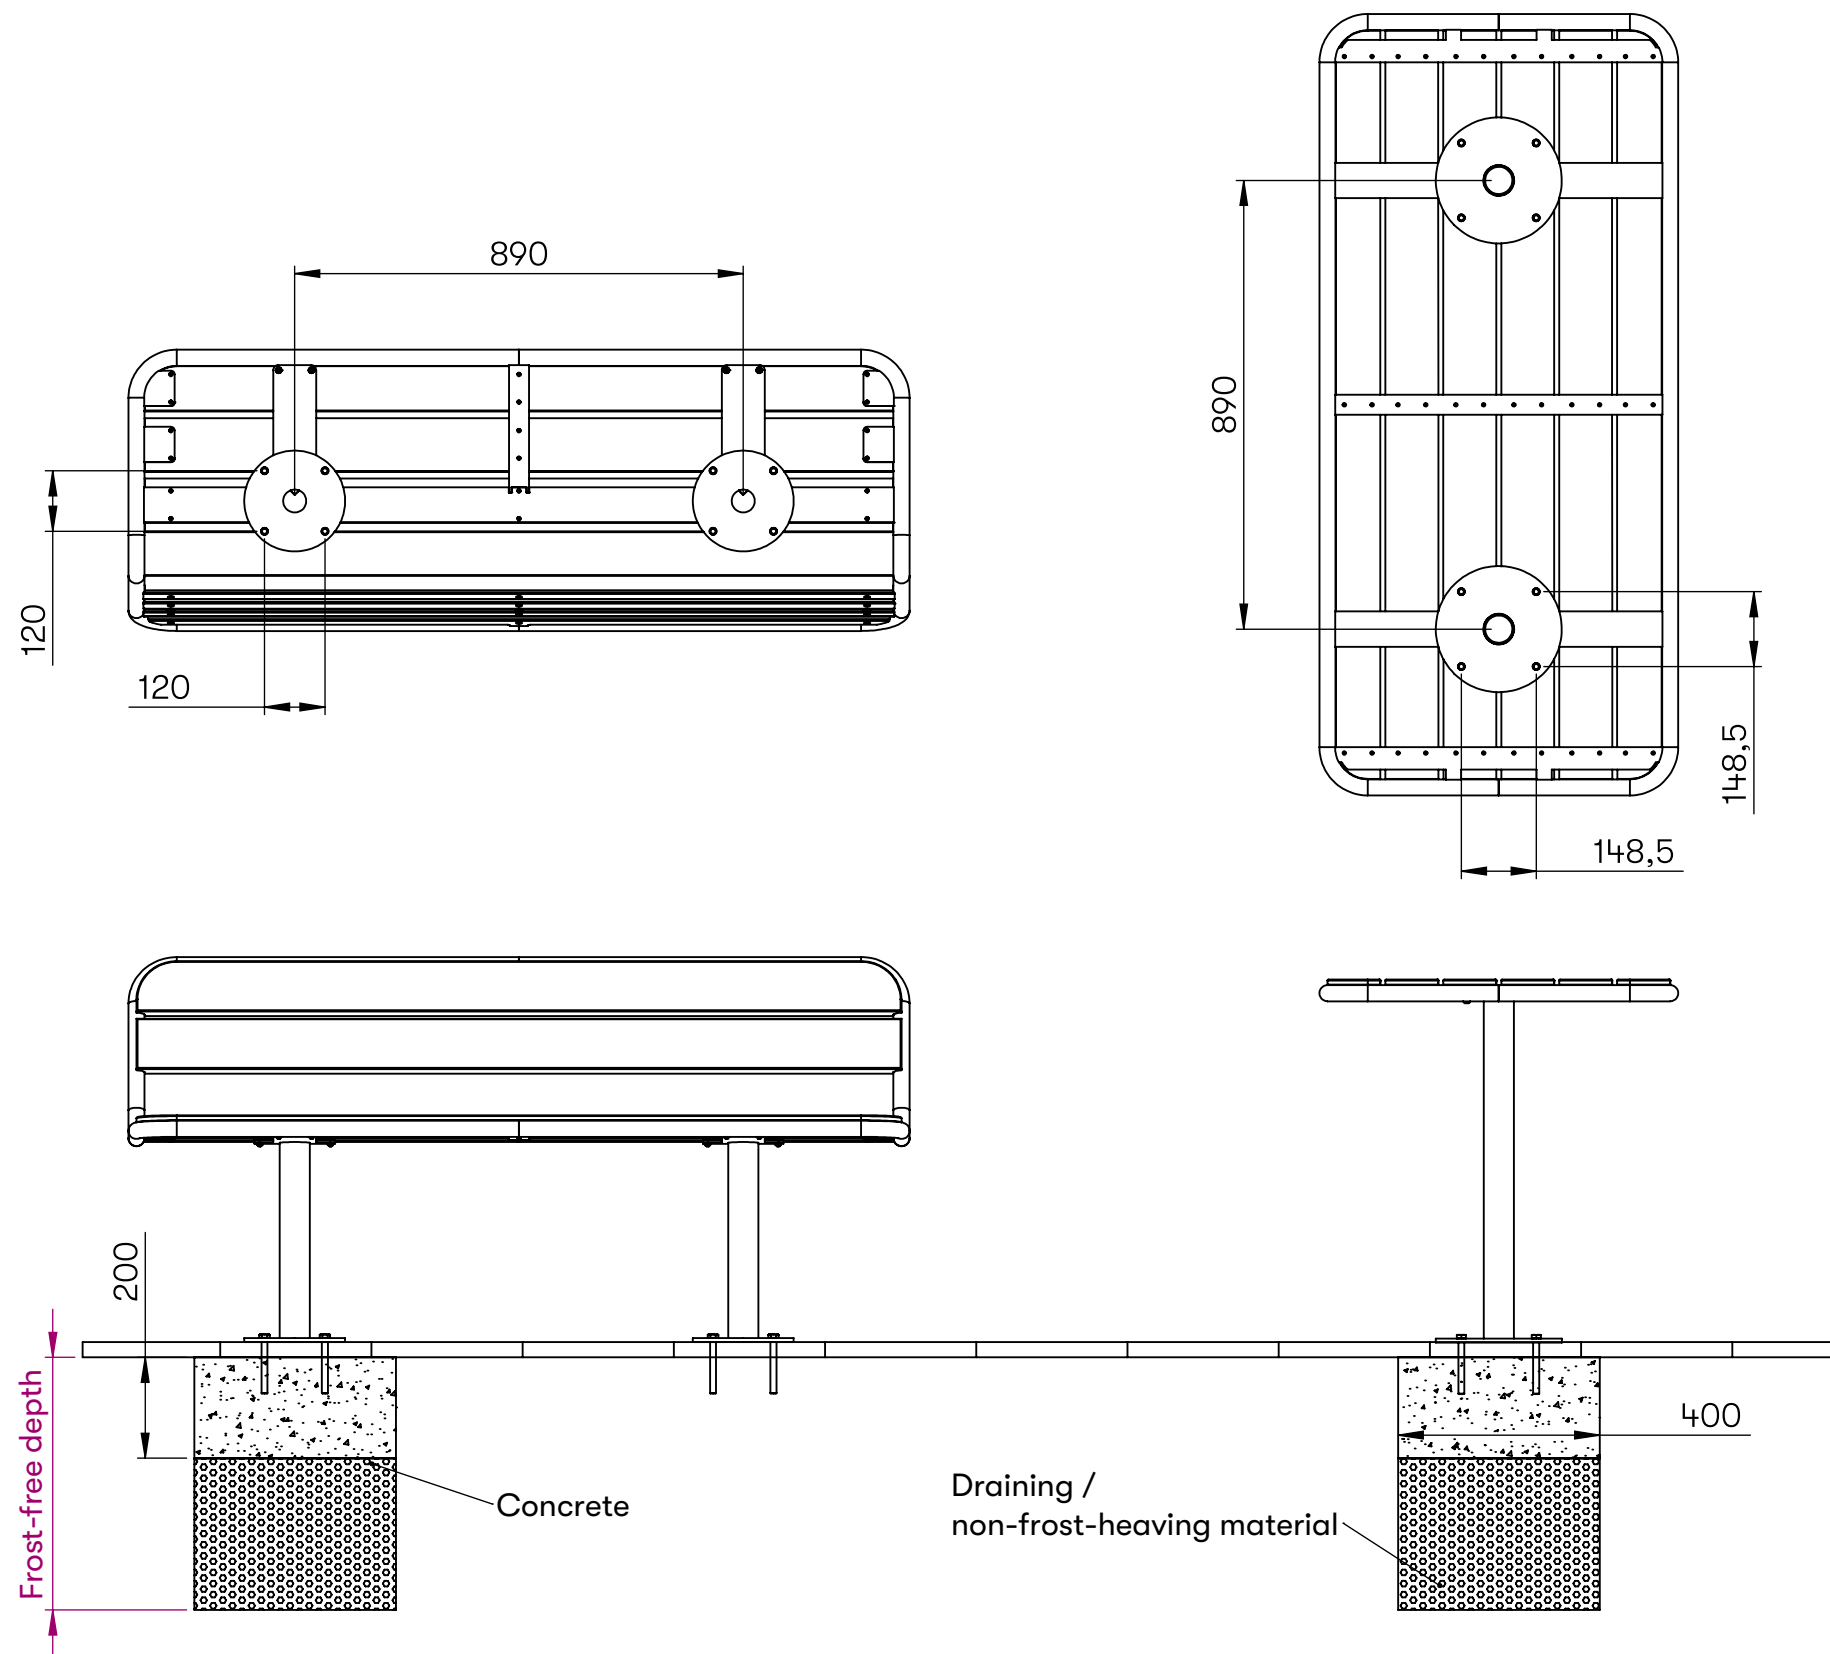

It is recommended to first position the furniture and check that the chair can rotate freely without hitting anything.

Example: The swivel chair should be placed 400 mm from the outer edge of the small table plus the table radius of 306 mm = C-C 706 mm from the table leg.

Mounted to the ground

By Odin Sollie
Drawn on 2025-10-29

Anchorable: Indicate **/N** after the product number
The furniture in this series is equipped with base plates with holes for mounting using M12 bolts or Ø12 mm screws.

The hole pattern of the base plate is identical for chairs, stools, benches, and seat benches. All table base plates are also the same.

The hole pattern of the base plates and the center-to-center distance (C-C) between the legs can be found on the respective product information page.

Mounting on wooden surfaces

Pre-drill and fasten using hex-head wood screws.

Mounting on paving stones or slabs

Remove the stones or slabs at the locations designated for the furniture base plates. Excavate down to frost-free depth and fill the holes with draining material. Pour concrete and replace the slabs. Ensure there is no bedding sand between the slabs and the concrete. Drill through the foundation and base plate for expansion anchors or chemical anchors. Mounting with expansion anchors allows for a detachable installation.

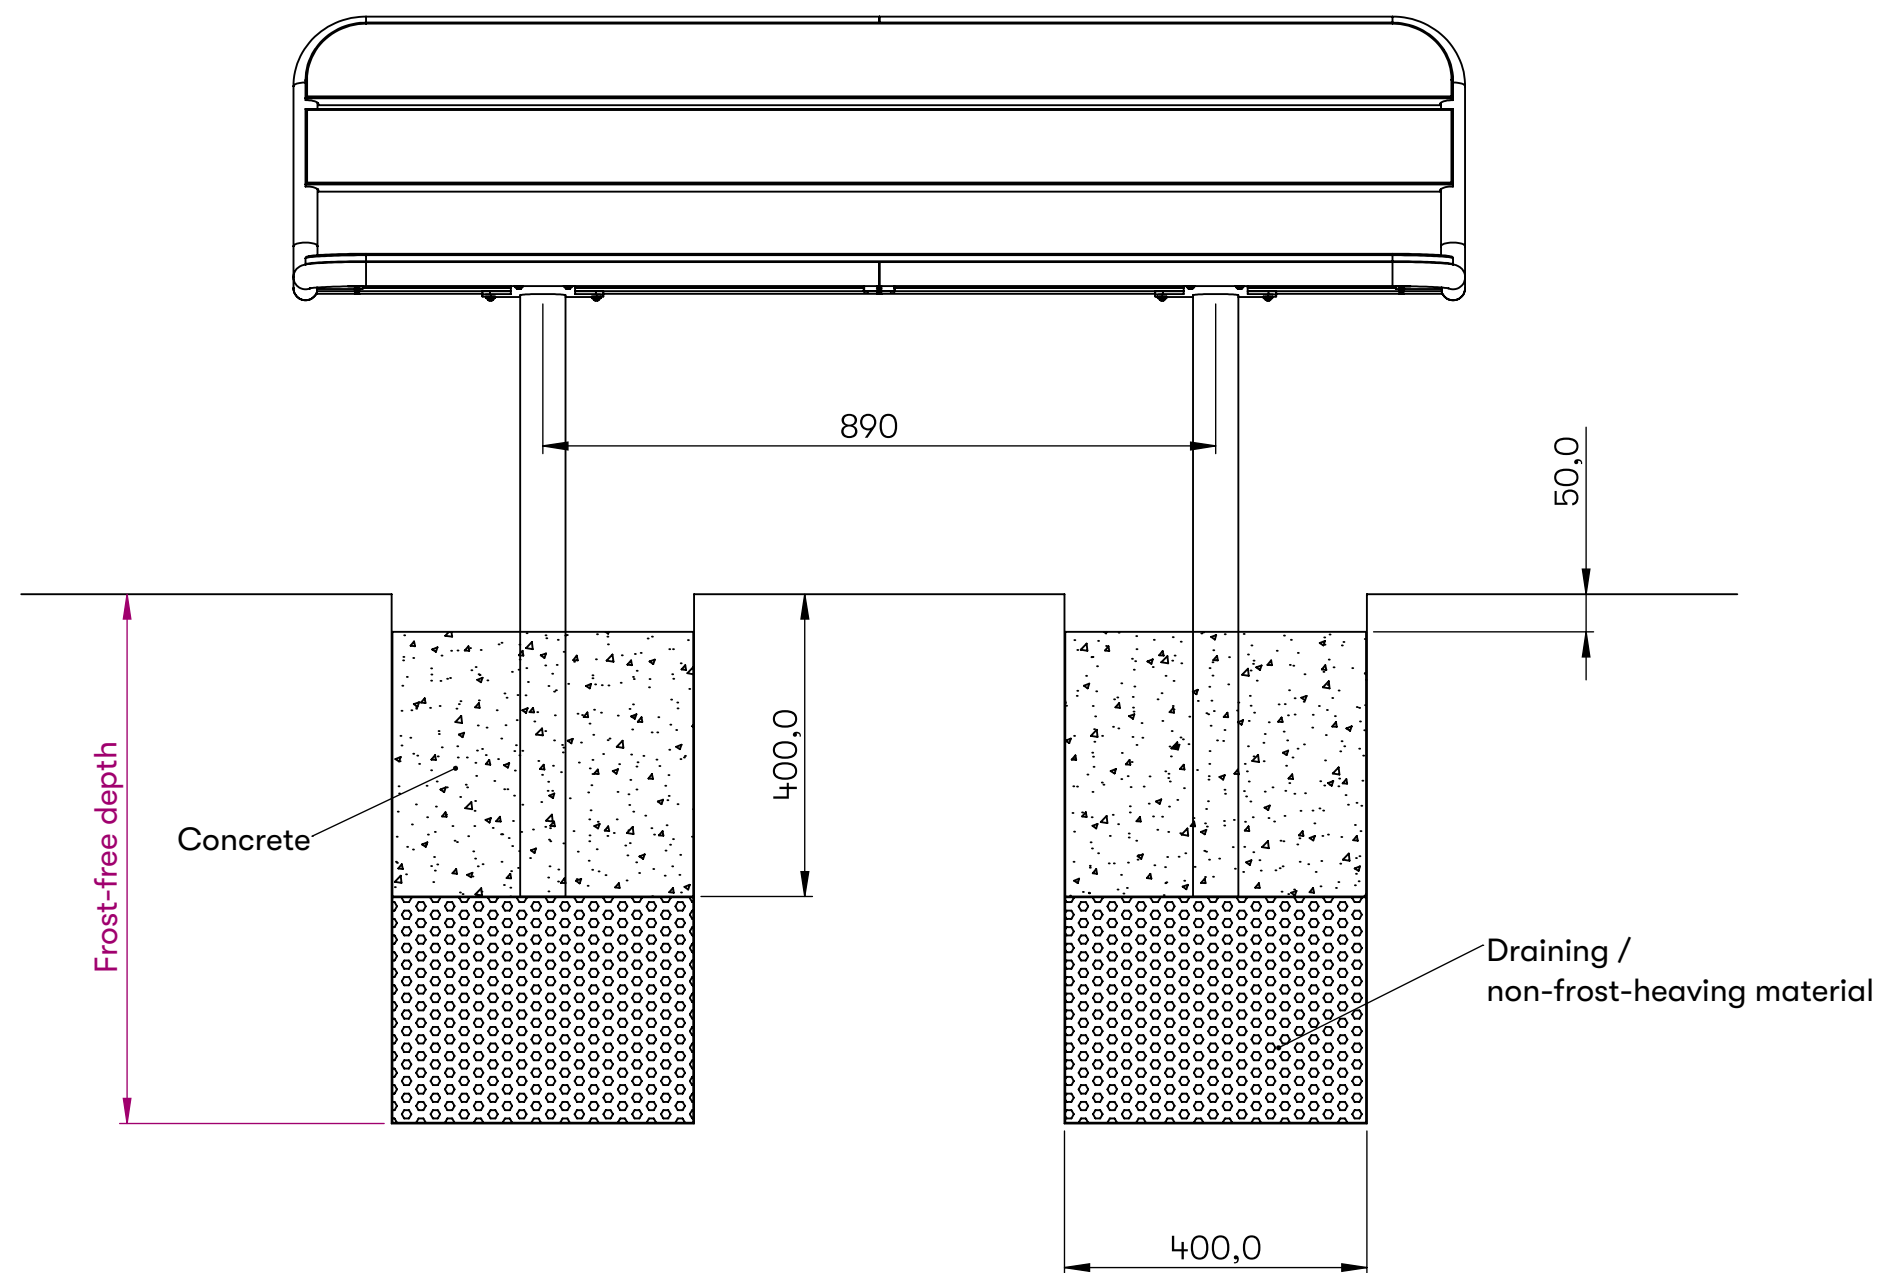

Mounting on concrete, stone blocks, etc.

Mount directly to the concrete surface using chemical anchors or expansion anchors according to the instructions above.

Gry furniture group

Mounting by concreting

By Odin Sollie
Drawn on 2025-10-29

Ground-fixed: Indicate **/M** after the product number
Dig a hole for each furniture leg with a diameter of approximately 40 cm. Excavate to frost-free depth and fill the holes with draining material so that the remaining depth of the hole is about 40 cm. Position the furniture with the legs in the excavated holes. Brace both vertically and horizontally.

Cast the legs in concrete. The concrete should not reach the ground surface but stop approximately 5 cm below it.
Backfill the soil and finish the ground surface.

The seats of chairs and benches should be positioned 45 cm above ground level, and table surfaces at 72 cm.

Mounting of swivel chair

By Odin Sollie
Drawn on 2025-10-29

Anchorable: Indicate **/N** after the product number

The swivel chair has a base plate with holes for mounting using M12 bolts or Ø12 mm screws.

Mounting on wooden surfaces

Pre-drill and secure with hex-head wood screws

Mounting on paving stones or slabs

Remove the stones or slabs at the locations designated for the furniture base plates. Excavate to frost-free depth and fill the holes with draining material, Pour concrete and replace the slabs. Ensure there is no bedding sand between the slabs and the concrete. Drill through the foundation and base plate for expansion or chemical anchors. Mounting with expansion anchors allows for a detachable installation.

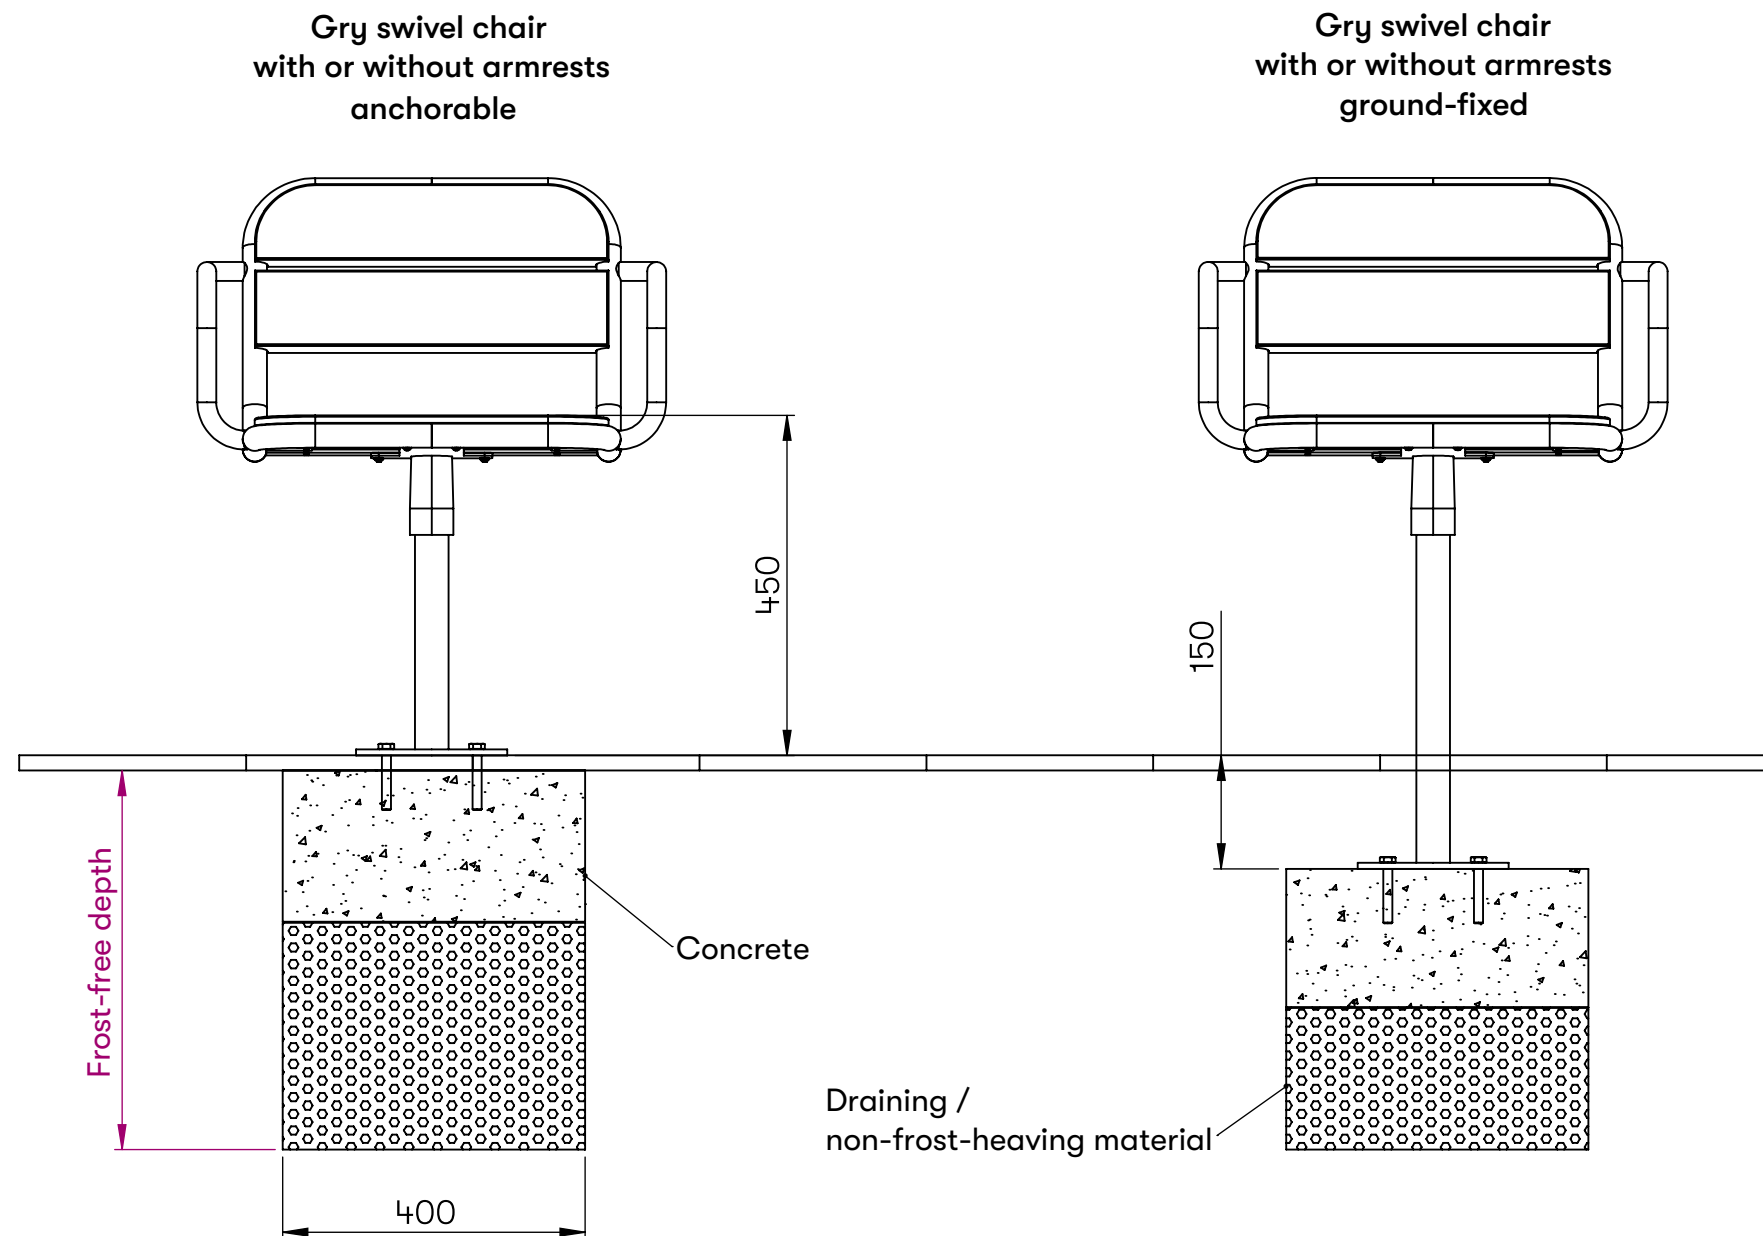

Mounting on concrete, stone blocks, etc.

Mount directly on the concrete surface using chemical anchors or expansion anchors according to the instructions above.

Ground-fixed: Indicate **/M** after the product number

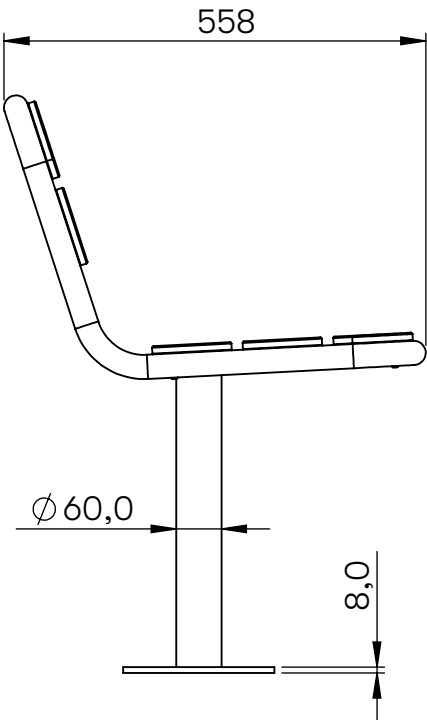

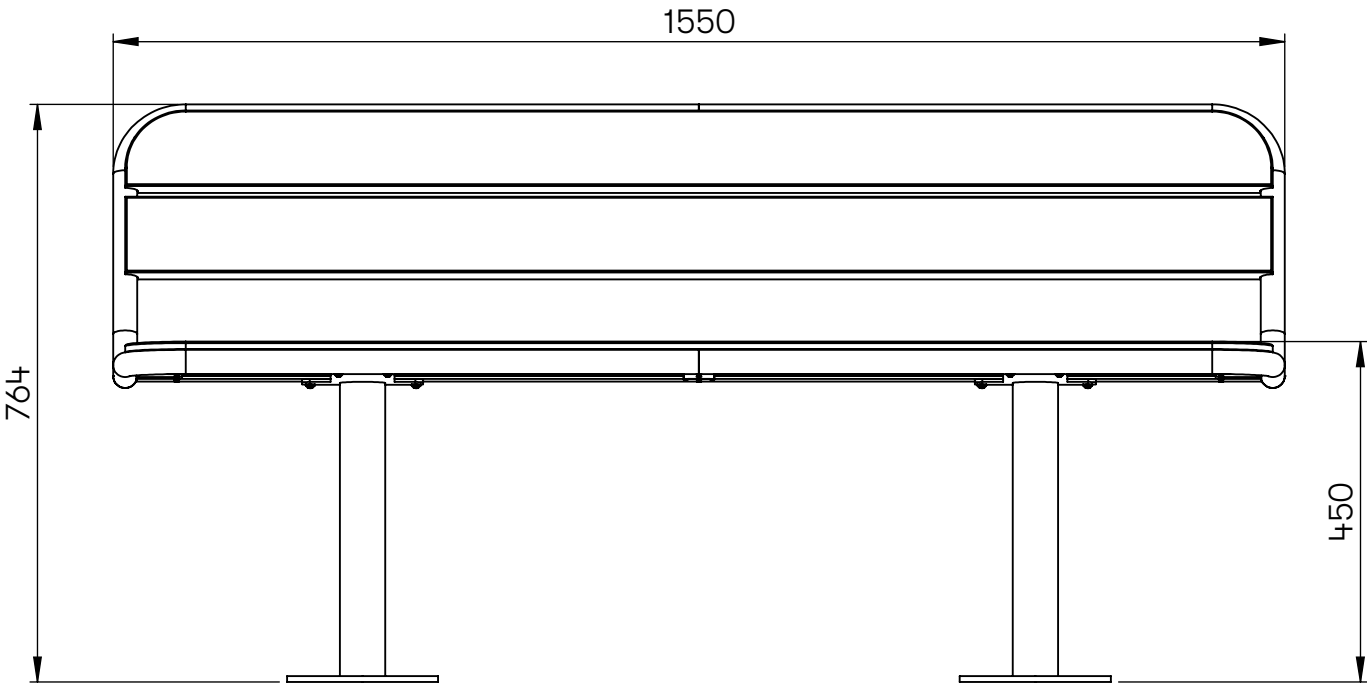

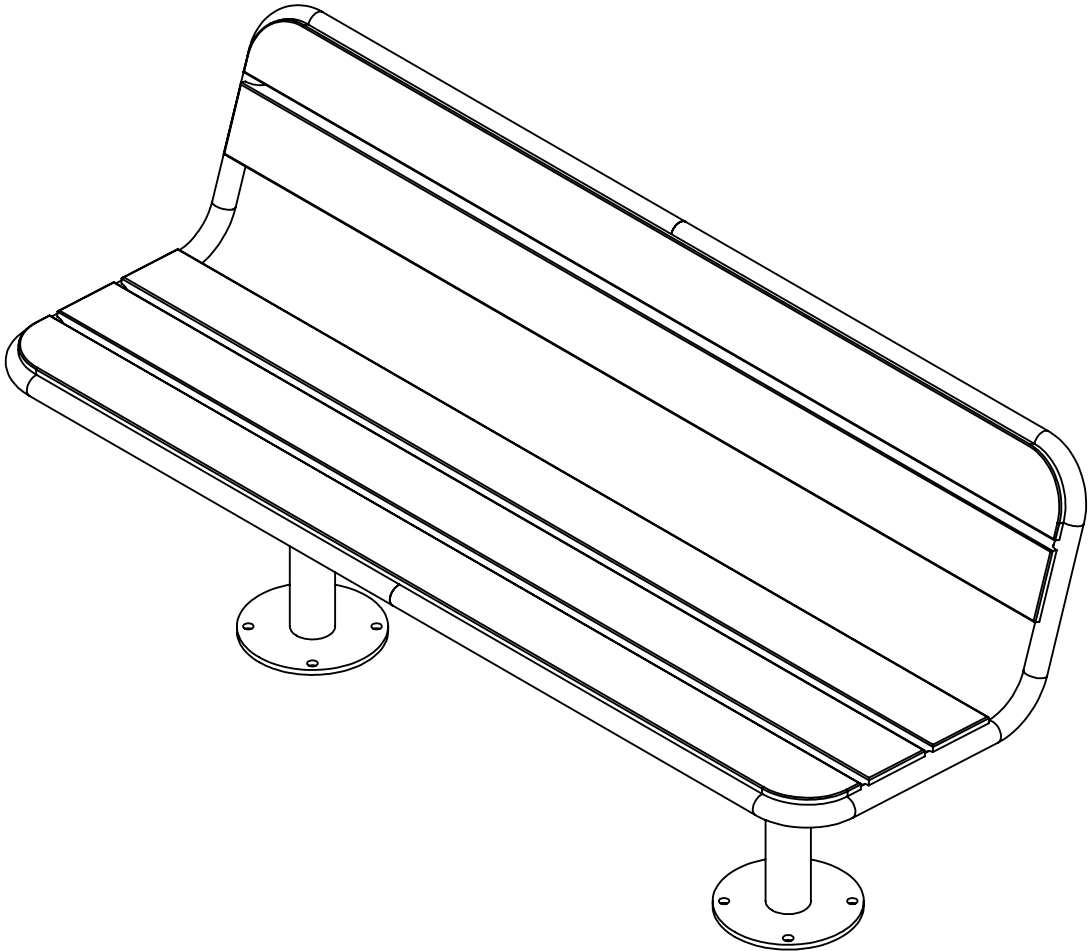

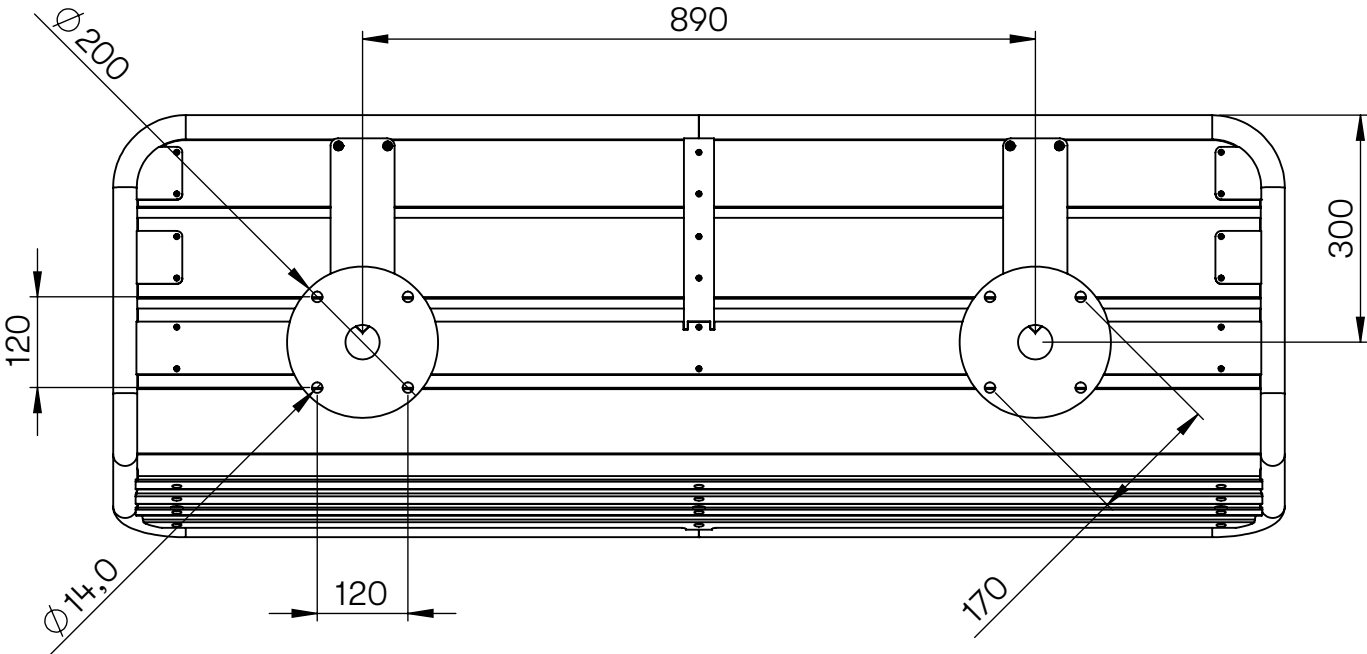

The ground-fixed swivel chair also has a base plate for bolting but features a leg extended 150 mm for anchoring below ground.

Excavate to frost-free depth, fill with draining material and cast concrete up to 150 mm below the finished ground level. Bolt the ground-fixed swivel chair to the foundation using expansion or chemical anchors. Fill the hole over the base plate and finish the ground around the chair leg.
